

Product Name: Solar Mate Secure I
Part Number: SMS001

Photo Filename: Solar Mate Secure I

Brief Description: The Solar Mate Secure is a PIR, movement activated, high power security light designed to provide light up to a range of 16 feet. Installed in minutes, Solar Mate Secure is supplied with a connection cable and wall fixings.

Catalogue Description: Solar Mate Secure is an efficient and easy way to provide movement activated security lighting where mains power does not exist.

Using the most advanced Thin Film solar cell technology, Solar Mate Secure's solar panel powers the three internal AA rechargeable batteries, located in the light unit, during the day ready for operation once the sun goes down. The Solar Mate Secure light unit contains 3 double sized super efficient LED's, which are powerful enough to illuminate an area up to 16 feet away from the light unit.

Its integrated PIR movement sensor can be adjusted both for sensitivity and time, so the bulbs can burn from between 30 seconds and 20 minutes per activation.

The Solar Mate Secure's light unit attaches to the Solar panel via a supplied 6 foot cable.

Full fitting instructions are included.
