

The Energy Saving Meter from EFERGY

This energy saving meter allows you to monitor the amount of energy you are consuming. It gives accurate reading every time the electrical device is turned on.

Other features also include an ability to calculate your costs and carbon footprint.

Having this information you can make adjustments to in the way you use energy in order to save money. The device is also useful in the work environment. It is an excellent tool for educating the family understanding of their energy consumption.

The energy saving meter is made up of three parts.

- A sensor
- A transmitter
- A portable display unit

It works by simply clipping around the electricity feed cable.
